

# JPS Sales & Load Forecast

Formal Summary Report — Fiscal Year 2026 Full-Year Outlook  
Actuals through June 2026 · Forecast July–December 2026 (Driver Forecast engine) · Prepared by  
FP&A Sales Analytics · July 2026

## Executive Summary

| Total (ex-EV)    | FY2025 Actual | FY2026 Budget | FY2026 Forecast | Var vs Budget | Var vs FY2025 |
|------------------|---------------|---------------|-----------------|---------------|---------------|
| All Rate Classes | 3,251.0       | 3,250.4       | 3,273.2         | +0.7%         | +0.7%         |

Full-year 2026 load is forecast at 3,273.2 GWh, +0.7% vs the FY2026 budget and +0.7% vs FY2025 actual — a modest net beat that masks material divergence underneath: **RT70** (large industrial/mining) is running well ahead of budget (+21.9%, driven by sustained bauxite/alumina and port-terminal demand plus a strong rebound in Other Metal Ore Mining), while **RT40** and **RT50** (medium commercial/general service) are tracking well behind budget (-6.1% and -10.9% respectively), consistent with a slower hospitality/general-commercial recovery following the November 2025 hurricane, compounded by three confirmed one-off account disruptions (see Methodology). Residential (RT10) and RT20 are both tracking ahead of budget (+2.7% and +3.8% respectively) — RT20 is driven by the residential seasonal pattern, not the commercial one (see note below).

**Methodology:** H2 2026 (Jul–Dec) is forecast using the Driver Forecast engine's rolling 3-month trailing-average base per account/cohort, compounded forward and adjusted by: (1) a segment-level macro % (commercial or residential — **note RT20 runs on the residential driver in this engine, not commercial**, a platform classification quirk, not a typo); (2) an industry-specific % stacked on top, but only for KAM-assigned key accounts (industry is not applied to the general non-KAM customer pool); (3) a weather adjustment; and (4) live per-account operational adjustments where entered (three confirmed in H2 2026: a -50%/-80% solar-PV cutover, a -50% one-month plant maintenance shutdown at Caribbean Cement, and a -100% store closure for three months). November–December 2025, distorted by a hurricane, were normalized via linear interpolation between October 2025 and January 2026 before deriving the seasonal assumptions. All figures exclude the EV rate class and bulk-billed placeholder accounts (Postpaid/Prepaid/Zero-Postpaid), reported separately. Figures independently verified against the live Driver Forecast engine's FY total and vs-budget KPI (match to 2 decimal places).

## Forecast Assumptions by Driver & Rate Class

Two segment-level macro drivers apply to every rate class based on its residential/commercial segment in the Driver Forecast engine (RT10, RT20 = Residential; RT40, RT50, RT60-ST, RT70 = Commercial). Values are month-over-month % growth applied to the rolling 3-month base.

| Driver          | Jul    | Aug    | Sep    | Oct    | Nov    | Dec    |
|-----------------|--------|--------|--------|--------|--------|--------|
| Commercial (%)  | +5.60% | +1.00% | -1.04% | -1.94% | -1.64% | -3.98% |
| Residential (%) | +8.81% | +5.88% | +1.00% | -1.53% | -0.91% | -2.43% |

**Weather driver:** a +2% adjustment is currently applied for July and August 2026 only. This value was entered outside the hurricane-normalization exercise above and its basis has not yet been confirmed — recommend verifying intent with the Driver Forecast owner before treating July/August as weather-elevated in this report's headline numbers.

## Industry-Level Drivers (Commercial sub-segments, selected)

Applied on top of the commercial segment driver for accounts tagged to each industry. Same 2025-seasonal, hurricane-normalized methodology.

| Industry                                                       | Jul    | Aug   | Sep   | Oct   | Nov    | Dec   |
|----------------------------------------------------------------|--------|-------|-------|-------|--------|-------|
| Banking, Insurance and Investments                             | +3.6%  | -1.2% | +1.5% | +2.2% | +2.2%  | +1.6% |
| Executive Offices                                              | -4.3%  | -5.9% | +7.8% | +5.5% | +0.0%  | -5.0% |
| Full-Service Restaurants                                       | +3.0%  | +3.9% | +0.5% | -3.4% | -2.0%  | +2.0% |
| Hotels (except Casino Hotels) and Motels                       | +6.2%  | -3.1% | -7.9% | +0.3% | -10.5% | +5.0% |
| Other Metal Ore Mining                                         | +27.4% | +2.5% | +0.4% | +1.0% | -5.9%  | -5.2% |
| Poultry Hatcheries                                             | +2.5%  | -2.9% | +0.5% | +5.9% | +4.3%  | +4.5% |
| Telemarketing Bureaus and Other Contact Centers                | +2.1%  | +0.8% | -4.8% | -0.2% | -8.4%  | -9.2% |
| Water Supply and Irrigation Systems                            | +4.8%  | -1.3% | -3.6% | +0.2% | -5.1%  | -5.3% |
| Wired and Wireless Telecommunications Carriers (ex. Satellite) | +2.5%  | +0.3% | -3.5% | +1.7% | -2.3%  | -2.5% |
| Air Traffic Control                                            | +1.0%  | +1.0% | --    | --    | --     | --    |
| Cement Manufacturing                                           | +0.0%  | +0.0% | +2.0% | +2.0% | +2.0%  | +0.0% |

Note: Other Metal Ore Mining's +27.4% July figure reflects a rebound off a depressed 2025 base and should not be read as sustained mining-sector growth. Hotels stays soft through most of H2 (weakest in November, -10.5%) before a December rebound (+5.0%) consistent with peak winter tourist season; Restaurants trends mildly negative into Q4.

## Industry H2 Actual vs. Forecast (GWh)

H2 2025 actual vs H2 2026 forecast, summed across every rate class the industry appears in. Covers KAM-assigned accounts tagged to each industry only (the volume the % drivers above actually apply to) — not the full rate-class total.

| Industry                                                             | H2 2025 Actual<br>(GWh) | H2 2026 Forecast<br>(GWh) | Δ %    |
|----------------------------------------------------------------------|-------------------------|---------------------------|--------|
| Water Supply and Irrigation Systems                                  | 93.4                    | 99.7                      | +6.8%  |
| Hotels (except Casino Hotels) and Motels                             | 94.2                    | 83.5                      | -11.4% |
| Other Metal Ore Mining                                               | 47.6                    | 82.3                      | +72.7% |
| Cement Manufacturing                                                 | 52.2                    | 43.0                      | -17.7% |
| Full-Service Restaurants                                             | 22.2                    | 24.4                      | +10.0% |
| Poultry Hatcheries                                                   | 21.6                    | 21.0                      | -2.5%  |
| Wired and Wireless Telecommunications Carriers<br>(except Satellite) | 18.8                    | 18.8                      | -0.1%  |
| Banking, Insurance and Investments                                   | 15.1                    | 16.4                      | +8.0%  |
| Executive Offices                                                    | 8.5                     | 8.7                       | +3.0%  |
| Telemarketing Bureaus and Other Contact Centers                      | 10.1                    | 8.2                       | -18.2% |
| Colleges, Universities, and Professional Schools                     | 4.2                     | 4.0                       | -3.3%  |
| Air Traffic Control                                                  | 0.6                     | 0.7                       | +1.3%  |

## Rate Class Performance: Forecast vs Budget vs Prior Year

| Rate Class   | FY2025 Actual (GWh) | FY2026 Budget (GWh) | FY2026 Forecast (GWh) | Var vs Budget | Var vs FY2025 |
|--------------|---------------------|---------------------|-----------------------|---------------|---------------|
| RT10         | 1,157.3             | 1,146.5             | 1,177.2               | +2.7%         | +1.7%         |
| RT20         | 627.3               | 622.0               | 645.8                 | +3.8%         | +3.0%         |
| RT40         | 776.7               | 805.2               | 756.5                 | -6.1%         | -2.6%         |
| RT50         | 362.8               | 375.9               | 334.8                 | -10.9%        | -7.7%         |
| RT60-ST      | 38.6                | 36.9                | 37.1                  | +0.7%         | -3.9%         |
| RT70         | 288.1               | 263.8               | 321.8                 | +21.9%        | +11.7%        |
| <b>TOTAL</b> | <b>3,251.0</b>      | <b>3,250.4</b>      | <b>3,273.2</b>        | <b>+0.7%</b>  | <b>+0.7%</b>  |

### Monthly Trend — Actual (Jan–Jun) vs Forecast (Jul–Dec) 2026

Solid line = actual; dashed marker line = forecast. Each panel scaled to its own rate class.

## First-Half & Second-Half Detail

### H1 2026 Actual vs. H1 2025 Actual

First-half comparison (Jan–Jun), both sides fully actual — realized performance, not forecast. This is what's already locked in ahead of the H2 outlook below.

| Rate Class   | H1 2025 Actual (GWh) | H1 2026 Budget (GWh) | H1 2026 Actual (GWh) | vs Budget    | vs H1 2025   |
|--------------|----------------------|----------------------|----------------------|--------------|--------------|
| RT10         | 577.8                | 529.5                | 536.7                | +1.4%        | -7.1%        |
| RT20         | 314.8                | 287.7                | 293.9                | +2.2%        | -6.6%        |
| RT40         | 393.8                | 367.3                | 360.4                | -1.9%        | -8.5%        |
| RT50         | 184.5                | 170.7                | 169.9                | -0.5%        | -7.9%        |
| RT60-ST      | 20.2                 | 17.1                 | 17.3                 | +1.0%        | -14.4%       |
| RT70         | 145.5                | 124.1                | 147.0                | +18.4%       | +1.0%        |
| <b>TOTAL</b> | <b>1,636.4</b>       | <b>1,496.4</b>       | <b>1,525.2</b>       | <b>+1.9%</b> | <b>-6.8%</b> |

H1 2026 came in at 1,525.2 GWh vs a budget of 1,496.4 GWh (+1.9%) and 1,636.4 GWh in H1 2025 (-6.8%). **RT70** grew the most YoY (+1.0%); **RT60-ST** declined the most (-14.4%). Unlike the H2 comparison below, H1 2025 was a clean period (pre-hurricane), so this YoY read is not distorted by a low base — it reflects real underlying demand movement.

### H2 2026 Forecast vs. H2 2025 Actual

Second-half-only comparison (Jul–Dec), isolating the forward-looking trajectory from the H1 result above. This is the cleanest read on underlying forecast momentum — it's not diluted by H1's already-known performance the way the full-year figures on the prior page are.

| Rate Class   | H2 2025 Actual (GWh) | H2 2026 Budget (GWh) | H2 2026 Forecast (GWh) | vs Budget    | vs H2 2025   |
|--------------|----------------------|----------------------|------------------------|--------------|--------------|
| RT10         | 579.5                | 617.0                | 640.5                  | +3.8%        | +10.5%       |
| RT20         | 312.5                | 334.3                | 351.9                  | +5.3%        | +12.6%       |
| RT40         | 383.0                | 437.9                | 396.0                  | -9.6%        | +3.4%        |
| RT50         | 178.4                | 205.2                | 164.9                  | -19.6%       | -7.6%        |
| RT60-ST      | 18.5                 | 19.8                 | 19.9                   | +0.4%        | +7.6%        |
| RT70         | 142.6                | 139.7                | 174.8                  | +25.1%       | +22.6%       |
| <b>TOTAL</b> | <b>1,614.6</b>       | <b>1,754.0</b>       | <b>1,748.0</b>         | <b>-0.3%</b> | <b>+8.3%</b> |

H2 2026 is forecast at 1,748.0 GWh vs a budget of 1,754.0 GWh (-0.3%) and 1,614.6 GWh in H2 2025 (+8.3%). **RT70** shows the strongest H2-over-H2 growth (+22.6%), while **RT50** is the weakest (-7.6%) — both consistent with the full-year drivers above (RT70 industrial strength; RT50's July Caribbean Cement maintenance shutdown and softer general-commercial demand). Note H2 2025 itself includes the hurricane-depressed November/December actuals, so H2-over-H2 growth here is partly a low-base effect, not purely organic gain — the vs-budget columns above are the more reliable read on absolute performance.

## Top 10 Customers by Volume (H1 2026)

Ranked by H1 2026 kWh sold, aggregated by customer name across all billing accounts. Excludes EV rate class and bulk-billed Postpaid/Prepaid placeholder accounts.

| #  | Customer                            | Rate Class | H1 2026 (GWh) | H1 2025 (GWh) | YoY %  |
|----|-------------------------------------|------------|---------------|---------------|--------|
| 1  | National Water Commission           | RT40       | 93.4          | 107.3         | -13.0% |
| 2  | Caribbean Cement Co Ltd             | RT50       | 56.9          | 39.9          | +42.6% |
| 3  | Alcoa Mins Of Ja Ltd                | RT70       | 45.0          | 44.3          | +1.6%  |
| 4  | Windalco                            | RT70       | 15.4          | 9.5           | +62.0% |
| 5  | CABLE & WIRELESS JA LTD             | RT20       | 14.6          | 17.3          | -15.3% |
| 6  | Caribbean Broilers Ja Ltd           | RT40       | 13.1          | 12.7          | +3.2%  |
| 7  | Riu Jamaicotel Limited              | RT70       | 12.3          | 13.0          | -4.9%  |
| 8  | Ministry of Health                  | RT40       | 12.2          | 13.0          | -6.0%  |
| 9  | Moscel Jamaica Ltd ( DIGICEL )      | RT40       | 11.9          | 11.8          | +0.8%  |
| 10 | Kingston Free Port Terminal Limited | RT70       | 11.9          | 13.7          | -12.6% |

National Water Commission and Caribbean Cement remain the two largest metered customers. Windalco (+62.0%) and Caribbean Cement (+42.6%) are the standout growth accounts, both tracking sustained production increases rather than one-off spikes (confirmed via account/row-count stability across the period).

## Bottom 10 Customers — Largest YoY Declines

Among material accounts (H1 2025 volume > 0.5 GWh), ranked by steepest YoY decline, aggregated by customer name. The account-ID-level view is not used here because several large customers were re-numbered mid-year in the billing feed (confirmed this session), which would otherwise misrepresent active accounts as churned.

| #  | Customer                                | Rate Class | H1 2026 (GWh) | H1 2025 (GWh) | YoY %   | Status             |
|----|-----------------------------------------|------------|---------------|---------------|---------|--------------------|
| 1  | Club Caribbean Limited                  | --         | 0.0           | 1.3           | -100.0% | NEEDS VERIFICATION |
| 2  | United Call Solutions (Jamaica) Limited | RT40       | 0.0           | 0.6           | -100.0% | Gradual wind-down  |
| 3  | Negril Hotel Developement Co. Ltd.      | --         | 0.0           | 1.5           | -100.0% | NEEDS VERIFICATION |
| 4  | Beaches Boscobel Hotel Mgmt Co Limited  | --         | 0.0           | 2.3           | -100.0% | NEEDS VERIFICATION |
| 5  | HOCATSA Jamaica Limited                 | RT50       | 0.4           | 2.6           | -85.9%  | Confirmed decline  |
| 6  | Carib Products Co Ltd                   | RT50       | 0.1           | 0.7           | -82.6%  | Confirmed decline  |
| 7  | Sandals Whitehouse Management Limited   | RT50       | 0.8           | 4.5           | -81.4%  | Confirmed decline  |
| 8  | Jamaica Broilers Group Ltd              | RT50       | 3.1           | 12.7          | -75.7%  | Confirmed decline  |
| 9  | Price Smart                             | RT40       | 0.9           | 3.4           | -72.8%  | Confirmed decline  |
| 10 | Seawind Key Investments Limited         | RT70       | 2.2           | 7.7           | -71.4%  | Confirmed decline  |

**Read with caution — 3 accounts flagged “NEEDS VERIFICATION”:** Club Caribbean Limited, Negril Hotel Development Co. Ltd., and Beaches Boscobel Hotel Management Co. Limited show zero billed kWh under their current account name for the entire Sep 2025–Jun 2026 window — i.e. the drop predates the November 2025 hurricane and cannot be attributed to it. This is consistent with either a genuine closure or an account rename/rebrand not yet reflected in this system. Recommend Sales/KAM confirm status before reporting these as lost load. United Call Solutions shows a gradual fade to zero from Sep–Dec 2025, consistent with a real, confirmed wind-down rather than a data artifact. The remaining 6 accounts (HOCATSA, Carib Products, Sandals Whitehouse, Jamaica Broilers Group, Price Smart, Seawind Key Investments) show real, ongoing but reduced consumption — genuine demand declines, several hospitality-sector and consistent with the slower post-hurricane recovery noted above.
