Net = 1 - |actual - forecast| / actual on the KAM total. Account level = 1 - the sum of each account's miss / actual. Green 95%+, amber 85 to 95%.

VARIANCE BY KAM (GWH)

EIGHT LARGEST ACCOUNT MISSES (GWH)

Customer	KAM	Forecast	Actual	Miss	What the history shows
PAC Kingston Airport Ltd.	Simone	0.16	0.83	+0.66	Billing 0.8 to 0.9 GWh a month; forecast carries an 80% defection.
Caribbean Cement Co Ltd	Nicole	8.55	9.11	+0.57	Above its 8.5 GWh base; no adjustment on file.
Windalco	Sharmica	1.47	1.86	+0.38	Base followed a low August (1.18); load recovered.
Petrojam Ltd	Ewan	1.39	1.76	+0.38	Base carried a low September (0.85); October normal.
Alcoa Mins Of Ja Ltd	Sharmica	0.00	0.26	+0.26	Forecast assumed zero; a small load still bills.
Riu Jamaicotel Limited	Anna-Kay	1.12	0.88	−0.24	Falling since July; forecast stayed at the base.
PriceSmart (Jamaica) Ltd	Ewan	0.03	0.26	+0.23	New load ramping (0.10 in September); not forecast.
Wisynco Group Limited	Tanya	1.45	1.66	+0.21	Rebounded from a soft August.

WHAT DROVE OCTOBER

1. **Too low by 8.7 GWh, too high by 5.0**
   Accounts above forecast added 8.7 GWh and accounts below it took 5.0, a net 3.7 GWh under.
2. **The base misled three large accounts**
   Petrojam (low September), NFE North (high August) and Windalco (low August) follow the three-month base, so a one-off month carried into October.
3. **Two defections have not shown up in the bill yet**
   PAC Kingston bills near 0.8 GWh against a forecast of 0.16, and Alcoa still draws 0.26 GWh against zero. New load (PriceSmart) is also late to the forecast.

ASK OF THE KAMS

For every account that missed by more than 0.1 GWh, add the reason in the workbook (**Largest misses**, last column). Confirm whether PAC Kingston and Alcoa should stay at their adjusted levels, and whether PriceSmart's ramp should be entered as new load.

The forecast is the Driver Forecast as it stood after the September close, rebuilt from the data and adjustments on file. It is not a stored snapshot.
